

Applescripts

Use Textexpander to create a link back to any email in Mail.app:

```
(*
  Returns a link to the first selected Apple Mail message
*)
tell application "Mail"
  set _msgs to selected messages of message viewer 0
  if (_msgs is not equal to missing value) then
    set _msg to first item of _msgs
    set _msgID to do shell script "/usr/bin/python -c 'import sys, urllib;
print urllib.quote(sys.argv[1])' " & (message id of _msg)

    return "message://%3C" & (_msgID) & "%3E"
  end if
end tell
```
