- I moved all my work files out from [OneDrive](#) today because I was sick of its pathetic, buggy, resource hogging ways on macOS. I moved the data to iCloud, but that has its own problems, mainly that there is no way to get the data to a Windows computer I have to use sometimes. I would have gone with Dropbox, but I'm not allowed to install software on the PC, so it would be the equivalent of iCloud in terms of data access anyway.
