

# Pixelmator Photo

## 2019-04-17

I bought this app for iOS to see if I could wean myself off the Lightroom subscription. It looks good, but I don't like the way it creates and saves an 80Mb working file to my iCloud drive for each photo I edit.

I also had to buy FE File Explorer Pro to enable the iOS Files app to integrate with my NAS that stores my RAW camera files.
